Omar El Malak

+1 905-609-6644 | omarelmalak28@gmail.com | omarelmalak.xyz | linkedin.com/in/omarelmalak | github.com/omarelmalak

Skills

Languages: Python, Java, SQL, C#, C, JavaScript, TypeScript, HTML/CSS, Ruby, Dart
Frameworks and Libraries: .NET, RabbitMQ, Spring, Next.js, Vite, React, React Native, Redux, FastAPI, Flask
Developer Tools: PostgreSQL, Supabase, MongoDB, Clickhouse, Docker, CircleCI, GCP, AWS EC2, Sentry, Figma

Education

University of Toronto (GPA: 3.81/4.0) Expected Graduation:
Computer Science Specialist + Business Minor + Mathematics Minor *May 2027*

- **Courses**: Software Design, Database Design, Programming on the Web, Machine Learning, Operating Systems

Experience

Backend Engineering Intern May 2026 – August 2026
HubSpot *Cambridge, MA, United States*

- Led development of a custom public API linter with **16 validation rules**, enforcing HubSpot's API design standards across **11,500+ monthly builds**.
- Led the design and solo implementation of a critical migration from runtime API response filtering to version-time generated wrappers, improving reliability and code predictability across **119 HubSpot public APIs**.
- Coordinated and rolled out dependency updates across **54 repositories**, enabling adoption of a new API wrapper generation framework.
- Solo developed the **first GitHub tool integration** for HubSpot's Breeze Assistant, enabling app developers to generate GitHub pull requests from the HubSpot UI. Presented the project to **60+ engineers** as part of hackathon.

Full Stack Engineering Intern January 2026 – April 2026
Ada CX *Toronto, ON, Canada*

- Built and deployed an **MCP server** for enterprise AI conversation testing, reducing test setup time from **minutes to seconds and queue latency by over 98%**. Owned the project end-to-end and hosted a bug bash with CX teams.
- Led rollout of **production features via LaunchDarkly** and built architecture diagrams and **Datadog dashboards**, supporting **1,050+ MCP requests in the first 3 weeks**. Monitored and resolved bugs **using Sentry**. ,
- Designed and implemented a 3-bucket input validation taxonomy, adding **11 validations** across **3 Flask APIs**; uncovered a **critical vulnerability** before enterprise client onboarding.
- Identified and resolved cross-team bugs, including a knowledge article retrieval latency reduction from **4m 39s to 2s (99.3%)** for 2 enterprise analytics clients.
- Shipped a confidence scoring system evaluated across **616 production cases**, **reducing overconfident outputs from 51.8% to 27%** while maintaining **94.2% decision agreement.**

Frontend Engineering Intern September 2025 – December 2025
Scotiabank *Toronto, ON, Canada*

- Built a multilanguage formatting library adopted across our lab and into shared components used by **10+ teams**.
- Built and refactored frontend components to improve maintainability, resolved production-critical security vulnerabilities, and increased cross-team repository **test coverage to over 79%**.
- **Only intern selected to represent a team at the year-end showcase** (all other teams represented by senior managers) and presented to **300+ engineers and executives**. Later appointed showcase manager for all teams.

Full Stack Engineering Team Lead January 2025 – May 2025
MyEdMaster *Toronto, ON, Canada*

- **Led a team of 7 engineers** to design, implement, and deploy an AI-powered assessment question database management system for tutors using **React (TypeScript)** and **FastAPI (Python)** to help **secure funding**.
- Enhanced OpenAI and Cohere LLM performance by creating datasets of **1,600+ manually labeled and synthetic data points**, achieving a **31% accuracy improvement** and a **54% reduction in token size** on base models.

Backend Engineering Intern June 2024 – August 2024
Geotab *Oakville, ON, Canada*

- **Led the winning team** of Geotab's Intern Innovation Challenge, developing the most innovative **computer vision** solution with a driver and manager-centered UI/UX design, along with AI collision and distraction detection models.
- Deployed features in **.NET (C#)** for thousands of vehicles across NA/EU/LatAM from **7 global partners**.
- Optimized JSON parsers to reduce memory usage by **80%**; results published in engineer-backed benchmark reports.
- Created an OEM device activation system with error handling and retry scheduling, supporting **200+ trucks in NA**.
